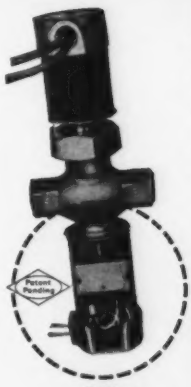
NEW... from
ATKOMATIC
VALVE POSITION INDICATOR



New Concept in
POSITIVE INDICATION
of Valve Position

. . . perfected after many years of research

- *Electrical Signal* can actuate many types of signal devices
- *Separate Power Supply* operates and indicates valve position independently of power supply to coil

Packless, completely self-contained, no electrical hazard. Signal from reed switches may be connected to signal lights mounted on cover or to many types of panel-mounted lamps, meters, etc. Especially suited to nuclear applications or process control where remote monitoring is essential.
